Hybrid power plants or Microgrids are small scale energy systems that use distributed energy resources (DER) to balance local needs. For example, diesel generators coupled with wind turbines, or solar and wind energy combined. Microgrids consist of components such as energy generators, battery storage, loads and smart control equipment.

Under net metering, a prosumer sell excess solar electricity to their local utility company at a profit and are credited for the amount of solar electricity they add to the grid - these credits are applied to their monthly electric utility bill, lowering their future energy costs and business's operating expenses. ...
