What is a photovoltaic power plant?

Photovoltaics (PV) were initially solely used as a source of electricity for small and medium-sized applications, from the calculator powered by a single solar cell to remote homes powered by an off-grid rooftop PV system. Commercial concentrated solar power plants were first developed in the 1980s.

What is a photovoltaic power station?

A photovoltaic power station, also known as a solar park, solar farm, or solar power plant, is a large-scale grid-connected photovoltaic power system (PV system) designed for the supply of merchant power.

What is a solar PV power plant?

The PV effect is a semiconductor effect whereby solar radiation falling onto the semiconductor PV cells generates electron movement. The output from a solar PV cell is DC electricity. A PV power plant contains many cells connected together in modules and many modules connected together in strings to produce the required DC power output.

When were solar power plants invented?

Commercial concentrated solar power plants were first developed in the 1980s. Since then, as the cost of solar panels has fallen, grid-connected solar PV systems' capacity and production has doubled about every three years.

Are solar photovoltaic power plants the future of power generation?

Although it currently represents a small percentage of global power generation, installations of solar photovoltaic (PV) power plants are growing rapidly for both utility-scale and distributed power generation applications.

How old is solar power?

Though solar power as we know it is no more than 60 years old, the discoveries that led to the solar cell began nearly 200 years ago. These discoveries about the properties of light and conductivity have made solar power what it is today.

The following is a list of photovoltaic power stations that are larger than 500 megawatts (MW) in current net capacity. Most are individual photovoltaic power stations, but some are groups of co-located plants owned by different independent power producers and with separate transformer connections to the grid.
