Argentina and Chile have a history of tension over border disputes in Patagonia. Last week, Faurie said that the installation company failed to properly check what the border ...

Most solar panels are made using silicon, which is a common and widely available material. Silicon is a semiconductor, which means that it can conduct electricity under certain conditions. To make a solar panel, thin wafers of silicon are cut from a large ingot of the material and then coated with a layer of phosphorus to create a negative charge.
