

Will China lead the way in sodium-ion battery production?

Although the companies are yet to commercialise their technologies, Chinese battery company Great Power last year announced a 50MW/100 megawatt-hour LDES project to power a data centre, demonstrating that sodium-ion batteries are already under consideration for LDES. "China will probably lead the way for sodium-ion battery production," adds Gorski.

Are sodium ion batteries a good investment?

Analysing 30 LDES technologies, the research found sodium-ion batteries to hold the most promise due to their fast improvement rate - around 57% in 2024. They offer more efficiency in round-trip energy use, greater operational flexibility and lose less energy during storage and supply.

When will sodium ion batteries become mainstream?

Sodium-ion batteries are not only improving at a faster rate than other LDES technologies but they are also set to be cost comparable with the cheapest forms of dispatchable power, and therefore enter mainstream use, as early as 2027.

Launched in January, the new "Long-term Decarbonisation Power Source Auction" hosted by the country's national association of grid operators, OCCTO, concluded with the announcement of results at the end of last month (30 April).. Up for award were 20-year fixed revenue capacity market contracts with utility companies for non-emitting power resources.

The new market rules will allow grid operator Terna to run large-scale energy storage auctions. Terna will now run a consultation with the industry on the proposed new auction system and the first auctions should take place ...

A ceremony was held yesterday in Niedersachsen, Germany, to welcome the start of operations at a "hybrid" energy storage plant that will use a combination of sodium-sulfur and lithium-ion batteries to stabilise the grid. The ...

The Natron factory in Michigan, which formerly hosted lithium-ion production lines. Image: Businesswire. Natron Energy has started commercial-scale operations at its sodium-ion battery manufacturing plant in Michigan, US, and elaborated on how its technology compares to lithium-ion in answers provided to Energy-Storage.news.. At full capacity the facility will ...

The Sodium-ion Alliance for Grid Energy Storage (SAGES) will focus on demonstrating high-performance, low-cost, safe sodium-ion batteries for grid applications to help meet the rising energy demand, ... SAGES is one of the first missions of the Grid Storage Launchpad, a new, national capability located on the PNNL-Richland campus designed to ...

Keywords: sodium-ion batteries, intercalation compounds, grid energy storage, sustainability 1. Introduction The past decade has seen dramatic reductions in levelized cost of energy (LCOE) for renewables such as wind and solar. This has allowed us to ...

Sodium-ion batteries are set to disrupt the LDES market within the next few years, according to new research - exclusively seen by Energy Monitor - by GetFocus, an AI-based analysis platform that predicts technological breakthroughs based on global patent data. Sodium-ion batteries are not only improving at a faster rate than other LDES technologies but ...

Electric vehicles (EVs) with sodium-ion batteries have been launched in China, but Peak Energy appears to be focusing primarily on the grid-scale stationary energy storage system (ESS) market. It said the "high cost structure, supply chain insecurity, safety concerns and large carbon footprint make (lithium-ion) non-ideal for grid-level ...

New vanadium redox flow battery technology from Invinity Energy Systems makes it possible for renewables to replace conventional generation on the grid 24/7, the company has claimed. SRP and EDPR NA add 200MW BESS to support Arizona's electric grid as demand hits record levels

Sodium-ion batteries are emerging as a promising solution for long-duration energy storage for real-world grid applications. Sodium is an abundant, widely available, and cost-effective element. Additionally, sodium-based batteries have high thermal stability, reducing ...
