Does proficad support photovoltaic circuit diagrams?

ProfiCAD supports the drawing of photovoltaic circuit diagrams. In addition to the common electrical engineering symbols, the library includes symbols such as solar cells, photovoltaic panels, solar collectors, inverters, etc. Should you need more symbols, you can create them in the symbol editor. Some sample drawings (click for full size):

How do you calculate the cost of a photovoltaic array?

Photovoltaic modules are usually priced in terms of the rated module output (\$/watt). Multiplying the number of modules to be purchased (C12) by the nominal rated module output (C13) determines the nominal rated array output. This number will be used to determine the cost of the photovoltaic array.

What are PPAs for distributed generation PV installations?

PPAs for distributed generation PV installations have many similarities with utility-scale PV plants, and some important differences too. Box 11 provides information on PPAs for distributed PV systems, even though this report does not cover such installations in a comprehensive manner.

What is a PPA for a large-scale PV project?

This section looks at the key elements of the typical PPA for large-scale PV projects, and describes how small solar power plants (distributed generation) can utilize similar contractual arrangements. PPAs are legally binding agreements between a power seller and power purchaser (off-taker).

How do you calculate the number of photovoltaic modules?

Multiplying the number of modules required per string (C10) by the number of strings in parallel (C11) determines the number of modules to be purchased. The rated module output in watts as stated by the manufacturer. Photovoltaic modules are usually priced in terms of the rated module output (\$/watt).

What is a photovoltaic I-V curve?

Photovoltaic I-V Characteristics Curves Manufacturers of the photovoltaic solar cells produce current-voltage (I-V) curves, which gives the current and voltage at which the photovoltaic cell generates the maximum power output and are based on the cell being under standard conditions of sunlight and temperature with no shading.
