How do I design a solar hot water & photovoltaic system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future solar hot water and photovoltaic system components. Space requirements and layout for solar water heating and photovoltaic system components should be taken into account early in the design process.

Who should design and install solar water heating systems?

The design and installation of solar water heating systems should only be undertaken by qualified individuals. Solar water heating systems involve components and operating principles not found in standard household plumbing installations.

Do solar water heaters need a T&P valve?

All water heaters regardless of whether they are solar power or not, must have this safety device which is required by national building codes. There is no T&P valve required in the collector loop as it is a non-pressurized type.

What is a solar storage tank?

The solar storage tanks basic function is to store the energy collected. The tank is equipped with an electrical element and becomes a water heater as a backup. A timer can be added to control the electrical element so it cannot compete with the sun's energy. Sun Ray Solar water heating systems require relatively little attention.

How does solar water heating work?

Solar water heating systems involve components and operating principles not found in standard household plumbing installations. Often, high operating temperatures, alternate fluids and unusual plumbing techniques are an integral part of solar systems. Failure to understand good design and installation practices can affect the

What are the maintenance requirements of sun ray solar water heating system?

The maintenance requirements of Sun Ray Solar water heating system are similar to those of conventional water heaters. The collectors, piping and storage tank should be checked for leaks, the system should be flushed periodically to remove tank and collected impurities (scaling in hard water areas).
