

## Photovoltaic inverter dust removal

## How do you remove dust from a photovoltaic module?

The main method of dust removal is manual or machine cleaning with water, but these methods have high costs and low cleaning efficiency [1,21,31]. It is worth noting that an improper cleaning process can cause mechanical and corrosive damage to photovoltaic modules. In areas where water is scarce, only mechanical methods can be used [79,80].

How to clean a photovoltaic module?

The cleaning methods of photovoltaic modules include manual dust removal, mechanical dust removal, electrostatic dust removal, self-cleaning coating and so on. In general, the self-cleaning coating has better performance in dust removal. It requires no power or manpower, relying on its own characteristics.

How to clean high dust concentration on PV solar panels?

Semi-automated cleaning systemSemi-automated cleaning is among the modern era methods towards cleaning high dust concentration on PV solar panels. It is promising technique by wiping or compressed air flow to remove the dust deposition and prevent the degradation of micro-scratches on the PV glass surfaces.

How to remove dust from solar panels?

Therefore, several of fouling cleaning techniques are currently used to remove dust from solar panel surfaces as shown in Fig. 4. These include traditional cleaning methods, new coating techniques and robotic cleaning mechanisms, electrostatic techniques, and air-blast cleaning techniques (Deb and Brahmbhatt, 2018).
