

What are the different types of PV inverters?

There are three primary tiers of PV inverters: microinverters, string inverters, and central inverters. Since microinverters are not rated for utility-scale voltages, we will largely ignore them in this article. String inverters convert DC power from "strings" of PV modules to AC and are designed to be modular and scalable.

Are photovoltaic panel prices going down?

On average, prices in all module categories have been corrected downwards by around 10%. Never before in the history of photovoltaics have panel prices plummeted so significantly in such a short space of time.

Are microinverters rated for utility-scale voltages?

Since microinverters are not rated for utility-scale voltages, we will largely ignore them in this article. String inverters convert DC power from "strings" of PV modules to AC and are designed to be modular and scalable. Smaller string inverters may have as few as one input, with one PV string per input.

Why did PV inverters become module-level microinverters?

Ironically enough, the drawbacks of early central inverters (mismatch losses, inflexible system design) led to the development of module-level microinverters. The PV inverter market of this era had two bookends: microinverters for residential and small commercial projects and increasingly large central inverters for everything else.

How many kilowatts can a PV inverter handle?

Pad-mounted central inverter co-located with a medium-voltage transformer. The first PV inverters were developed in the 1980s as a spinoff of drive system technologies. At the time, all models could be considered central inverters rated to handle no more than a few kilowatts. As with any new technology, early iterations were far from perfect.

Is the utility-scale PV market maturing?

The utility-scale PV market is maturing. Last year, 22.5 GW of utility-scale PV was installed in the US, a 77% jump from 2022. Solar PV accounted for over half (53%) of all new electricity-generating capacity additions for the first time ever.
