## What does a PV inverter do?

The inverter is the heart of every PV plant; it converts direct current of the PV modules into grid-compliant alternating current and feeds this into the public grid. At the same time, it controls and monitors the entire plant.

### Why do we need a solar PV system?

Over the last 50 years, solar PV systems have evolved into a mature, sustainable and adaptive technology. The unique nature of PV system power generation necessitates the need for new and effective electrical protection products for overcurrent, overvoltage and isolation events.

#### What is a PV surge protection device (SPD)?

The Bussmann range of PV surge protective devices (SPDs) provides complete system protection with PV ADVANCE to suppress lightning current and PV PRO or PV HEAVY DUTY to suppress overvoltage events. Together, they protect the DC voltage section of a PV system. Max.

#### Do PV modules need fuse protection?

Fuse protection is required any PV system that is connected to a battery. It should be remembered that the PV module performance varies with temperature and irradiance level. In operation, PV OCPDs are influenced by ambient temperature and derating should be factored in when being specified.

Should a PV inverter be mounted in the middle of an array?

Mounting the inverter in the middle of an array table, as shown in Option 2, dramatically reduces PV Wire require-ments, but complicates array service-ability. Service technicians will have a harder time reaching each inverter. It may also be impractical or undesir-able to run ac conductors within the array field.

### Can PV systems be protected from lightning?

Despite the high lightning risk that PV systems are&# 160;exposed to, they may be protected by the appropri ate

application of Surge Protection Devices and a Lighting Protection System.

One must give thoughtful and careful consideration to the following:
