Does cooling technology improve solar photovoltaic cells performance?

Ghadikolaei, S.S.C. Solar photovoltaic cells performance improvement by cooling Technology: An overall review. Int. J. Hydrog. Energy 2021, 46, 10939-10972.

How does a photovoltaic cooling system work?

Ahmed et al. ,developed a photovoltaic cooling system by installing a rectangular channel at the back of the PV panel through which the cooling water flows using transparent pyrex sheets. The average temperature reduction for the front surface and back surface was found to be 14.5 °C and 9.7 °C,respectively.

What is Concentrated Photovoltaic-Thermal (CPVT) collector?

The concentrated photovoltaic-thermal (CPVT) collectors are characterized by providing a large amount of thermal energy by a small PV area, but this leads to a sharp rise in the temperature of the cell surface, which significantly deteriorates the electrical performance. Therefore, it was necessary to use many different cooling techniques.

Can refrigerants be used as a cooling medium for PV cells?

In recent years, refrigerants have been used as a cooling medium of PV cells in the so-called heat pump-based PV/T system (HP-PV/T).

Does cooling affect the performance of poly-crystalline PV panels?

Lastly, Almuwailhi and Zeitoun used three distinct methodologies to examine the impact of cooling on the performance of poly-crystalline PV panels: (i) natural convection, (ii) forced convection, and (iii) evaporative cooling with forced and natural convection.
