

How can a microgrid improve the reliability of solar PV?

In order to overcome the problems associated with the intermittency of solar PV and enhance the reliability, energy storage systems like batteries and/or backup systems like diesel generators are commonly included in the microgrids [11,12].

Why do we need a PV-based microgrid?

The increasing demand for reliable and clean energy promotes the installation of PV-based microgrids. Appropriate sizing of microgrid components, that is, number and size of PV modules, batteries, DGs and associated power electronic devices determines the efficient and economic design of the microgrid.

What factors drive microgrid development and deployment?

The factors driving microgrid development and deployment in locations with existing electrical grid infrastructure fall into three broad categories: Energy Security, Economic Benefits, and Clean Energy Integration, as described in Table 2, below. Table 2. Drivers of microgrid development and deployment.

What is a technical assessment for a solar PV-based microgrid?

Technical assessment is based on the nature of the energy sources and the load of the microgrid. For a solar PV-based microgrid, the main technical aspects that are necessary to be considered include rating of PV modules, tilt angle, fill factor, MPPT, PV efficiency, and efficiencies of the power electronic converters.

Do PV based microgrids have a negative environmental impact?

Moreover, battery energy systems are also reported to have negative environmental impacts, which is also required to be taken into consideration while sizing/designing a PV-based microgrid [48 - 50]. In Figure 3, the common design considerations for PV based microgrids have been summarised.

Can a microgrid be integrated with PV and wind power?

The combination and capacity of PV and wind power generation increase rapidly in the integration of microgrids; however, the sustainability of continuous power is very difficult due to the intermittent characteristics of irradiation and wind speed.
