Can you add solar to a flat roof?

Fully certified. Adding solar to a flat roof has built-in complexity and requires a wide array of options to meet the building requirements--such as a mechanically attached system, a ballasted system, or even a hybrid system. An attached system that utilizes the strength of XR Rails to support a wide range of solar panel tilting angles. [Learn More](#)

What is a flat roof solar system?

Flat roof solar is usually 'free-standing' on the roof. The mounting frames are not secured to the roof and therefore the system has to be weighted down using ballast. The structure of the roof needs to be able to support the ballast. On commercial properties, flat roofs tend to be a repository for air conditioning systems and lift motor housing.

What is a Solar Roof mounting system?

Solar roof mounting systems are the backbone of rooftop solar installations. They are the critical components that secure solar panels to roofs, ensuring stability and performance while withstanding environmental stressors. The design and construction of these systems are paramount to the overall success of solar energy generation.

Which solar mounting frame is best for a flat roof?

In most situations, a free-standing ballasted flat roof solar mounting frame is preferable. Using a free-standing mounting system weighed down with ballast, avoids the need to penetrate the roof surface.

Are Solar Roof mounting systems economically viable?

The economic viability of solar roof mounting systems is a key consideration for installers, procurement managers, and EPC contractors. A detailed economic analysis can help in making informed decisions about the design and implementation of these systems. A thorough cost-benefit analysis will consider:

What angle should a flat roof solar panel be mounted?

One of the most common areas of misunderstanding surrounding flat roof solar installations is the panel mounting angle. Solar panels (in the UK) produce most power when mounted at between 30 and 40 degrees to the horizontal, facing due south. It is therefore natural to assume that this is the best angle to tilt them at for flat roof installations.
