

Photovoltaic panel installation time

How long does it take to install solar panels?

Once you decide on a solar company and system, the installation process begins. The time it takes to get your solar panels up and running depends on a handful of factors. Generally, you can expect to wait a few months before your solar panels produce energy for your home. In that time, your solar company should follow these five main steps: 1.

How long does it take to get rooftop solar panels?

If you've decided to get rooftop solar panels, be patient -- it'll take a few months before you see those savings in your electric bill. Installing solar isn't as a quick-turnaround project as you might expect.

How long does a solar project take to get approved?

The Department of Energy has led an effort in recent years to encourage local governments to speed up the solar permitting process, leading to some approvals happening in under two weeks while more stubborn jurisdictions may still delay your project for a few months.

Should I upgrade my solar panels before installation?

The more common upgrades include re-roofing, upgrading your electric panel, or reinforcing your roof to ensure it can withstand the additional weight of solar equipment. If upgrades are necessary prior to installation, it can mean further delaying a solar panel installation.

How long does it take to go solar?

The journey from initially signing the contract to finally going solar roughly spans around 45 days. Truth is, a significant portion of this wait time is obtaining necessary permits and the time taken by the utility company to process your solar billing application.

How long does it take to get a solar permit?

You can get an idea of how quickly permitting takes with the clickable map in the Solar TRACE tool from the National Renewable Energy Laboratory, though only for areas with enough data to provide estimates. Installation day is usually about the homeowner staying out of the way and just standing back and observing.
