Does solar racking work on a roof?

Proper solar racking safely affixes solar panels to buildings, so your racking system must be compatible with your roof. The essential components of a solar racking system include flashings, mounts, rails, and clamps. The top solar panel racking brands include SnapNrack, Unirac, IronRidge, Quick Mount PV, EcoFasten, and AllEarth Renewables.

What makes a solar panel racking system different from a rail system?

Heavier-- these setups are far heavier than their rail-free counterparts. Flexibility -- the rail system doesn't lend itself to simple, modular installations. This solar panel racking mounts a row or multiple rows of PV modules to the ground.

What are the best solar racking brands?

The top solar panel racking brands include SnapNrack, Unirac, IronRidge, Quick Mount PV, EcoFasten, and AllEarth Renewables. Aesthetics, leak protection, wire management, and ease of installation all factor into racking system design. How does solar racking work?

Do solar panels need a roof rafter?

Solar installers need access to your attic or the underside of your roof during an initial site visit to ensure that your rafters are structurally intact and appropriately spaced to accommodate the mounts for your solar panel system. 3. Rails Mounts hold up rails, the component of solar racking that your solar panels sit directly on top of.

How do solar panels attach to a roof?

Mounts Solar panel systems are attached to your roof with mounts. Mounts are sometimes referred to as "feet" and are usually attached to your roof with a bolt through the flashing and into a rafter, securing your whole system. There are many varieties of mounts used in different racking systems.

What is a metal roof racking system?

Metal mounts in the shape of the tiles create a solid base for the racking system. These metal tiles only replace specific sections needed for the mounting system, so you keep your beautiful roof. SnapNRack offers a great standing seam metal roof mounting system that doesn't require any drilling.

With the proper racks, mounts and installation, your roof will have no trouble handling the load. The main concern is the solar panels catching strong winds and flying off of your roof, taking a chunk of the roof with it. As long as the ...
