

What is a solar pile & foundation?

At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond. Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum.

What are the different types of photovoltaic support foundations?

The common forms of photovoltaic support foundations include concrete independent foundations, concrete strip foundations, concrete cast-in-place piles, prestressed high-strength concrete (PHC piles), steel piles and steel pipe screw piles. The first three are cast-in situ piles, and the last three are precast piles.

How is a ground mounted PV solar panel Foundation designed?

This case study focuses on the design of a ground mounted PV solar panel foundation using the engineering software program spMats. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single pole.

What is a solar pile structure?

Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum. These vertical supports anchor the panels securely to the ground, ensuring stability and resistance against environmental factors.

How do engineers design foundations for solar panels & support structures?

Based on a thorough analysis of the site, engineers design suitable foundations for solar panels and support structures. The foundation design takes into account factors such as soil bearing capacity, settlement, and potential for soil liquefaction or other geotechnical hazards.

Why is pile design important?

Their design allows for easy installation, alignment, and support, which is crucial for maximizing solar energy capture in utility-scale projects. Pile design ensures that the pile structures align well with the foundation design, which is critical for the structural integrity and load-bearing capacity of the solar array.
