What is a solar pile & foundation?

At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond. Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum.

How is a ground mounted PV solar panel Foundation designed?

This case study focuses on the design of a ground mounted PV solar panel foundation using the engineering software program spMats. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single pole.

How do I choose a pile for a solar farm?

The load-bearing capacity needed for the solar farm is another critical factor in selecting the type of pile. Projects requiring high load capacities--such as those with large, heavy solar panels or in regions with significant wind forces--may necessitate the use of concrete or composite piles.

Are solar farms a good market for Pile Driving Contractors?

As the demand for renewable energy increases--solar farms are becoming an ideal market for pile driving contractors due to the need for stable, long-lasting foundations that can support large-scale solar installations.

How do I install a solar panel using screw piles?

Before installing your solar panel using screw piles, contact one of our certified installers so that they can determine the type, amount, and location of the helical (screw) piles to be installed. Depending on your project, they will be able to estimate the costs. Rapid installation Minimal impact to the landscape No excavation

How do engineers design foundations for solar panels & support structures?

Based on a thorough analysis of the site, engineers design suitable foundations for solar panels and support structures. The foundation design takes into account factors such as soil bearing capacity, settlement, and potential for soil liquefaction or other geotechnical hazards.
