What is a solar pile structure?

Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum. These vertical supports anchor the panels securely to the ground, ensuring stability and resistance against environmental factors.

What is a solar pile & foundation?

At Exactus Energy, we specialize in providing thorough solar pile and foundation designs to set you up for success through installation and beyond. Solar pile structures are foundational components supporting solar panel arrays, often composed of durable materials like steel or aluminum.

Are helical piles good for solar panels?

Helical piles and micropiles work well in compression and tension applications and are ideally suited for solar panel installation. What are the differences between drilled shaft and helical piles? What equipment options are available for their installation?

How many helical piles are installed a day?

Some manufacturers of helical piles for solar array anchoring assert installation rates as high as 500 piles per day. What type of installation equipment is required for drilled shaft piles and helical piers?

Are helical piles a good choice for solar array anchoring?

Depending on ground conditions, helical piles can often be shorter in length and therefore cost less in installation time and energy consumption than comparable driven piles or drilled shafts. Some manufacturers of helical piles for solar array anchoring assert installation rates as high as 500 piles per day.

How deep is a drilled shaft pile for a solar array?

Drilled shaft piles for solar array footings can vary anywhere from 6 to 24 inches in diameter and 5 to 30 feet deep, depending on site conditions and other variables. The drilled shaft or borehole is filled with high-strength cement grout or concrete. At times, steel casing or re-bar is used for reinforcement.
