What is Solar PV Mounting Rail SPC-R001?

Solar PV Mounting Rail SPC-R001 is a customizable length aluminum rail used for solar panel installation. It can support solar panels with strong strength when installed on tile roofs. The sizes range from 50 cm to 600 cm.

What size aluminum rails can be used for solar installation?

Our mounting rails SPC-R001 can support solar panels with strong strength when installed on tile roofs. Sizes for the aluminum rails range from 50 cm to 600 cm. Customized lengths are acceptable for solar installing projects. The mounting rails come with an inner hexagon bolt (M8 X 25 mm), aluminum T sliding nuts, mid clamps, and end clamps.

How many PV panels will a Stan-Dard rail kit cover?

Used between PV panels to secure to Stan-dard Rail 1 kit will cover 2 PV panels within a row. Part number changes depending on panel required. Length of bolt depends on the thickness of the PV panel. Used on the first and last PV panel in a row 1 kit will cover the first and last PV panels in a row.

Can a racking system be used to ground a PV module?

This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specic module has been evaluated for grounding and/or mounting in compliance with the included instructions. The system is a non-separately derived system.

How to mount solar modules on a roof?

Mounting diagram There are various possibilities for the arrangement of the mounting system and the modules on the roof. The most common option is to horizontally assemble type TF50+ carrier rails and arrange solar modules vertically. For this reason, any further mounting procedures describe such an arrangement.
