How to detect small cracks in PV modules?

Detecting small cracks in PV modules is a challenging task. These cracks can occur during production, installation and operation stages. Electroluminescence (EL) imaging test procedure often used to detect these cracks. Defective images with linear and star cracks obtained from EL are collected.

Does a crack in a photovoltaic module affect power generation?

This paper demonstrates a statistical analysis approach, which uses T-test and F-test for identifying whether the crack has significant impact on the total amount of power generated by the photovoltaic (PV) modules. Electroluminescence (EL) measurements were performed for scanning possible faults in the examined PV modules.

What causes cell cracks in photovoltaic panels?

Cell cracks appear in the photovoltaic (PV) panels during their transportation from the factory to the place of installation. Moreover, some climate proceedings such as snow loads, strong winds and hailstorms might create some major cracks on the PV modules surface [-].

Can cracks degrade PV output power under controlled indoor testing?

Usually, and as explained in multiple previous studies 21,22,23, cracks can degrade the PV output power under controlled indoor testing; these various studies, however, do not consider the influence of the size of the cracks and the correlation between the cracks and their thermal impact on the PV modules.

What is the standard test condition for solar panels?

The standard test condition (STC) for all examined solar panels are: Solar Irradiance = 1000 W/m 2; Module Temperature = 25 °C. Table 1. Electrical characteristics for both PV system modules. 2.2. Electroluminescence setup and PV modules cracks The electroluminescence system developed is presented in Fig. 2 (a).

Can PV solar cells be classified as cracked cells?

In practice,PV solar cells cannot be easily classified as cracked cellsunless using some imaging techniques such as EL,thermal and fluorescence. The main contribution of this work is the development of an EL imaging system which can detects micro cracks in PV modules.
