

Photovoltaic panel tester application

How can SDC test PV panels?

Measure the durability and longevity of PV panels. SDC's mechanical load test equipment can perform static load testing to simulate typical wind and snow loads on modules and dynamic load testing to confirm PV module durability. Our system is equipped with zone control which can isolate and test only certain zones of the panel, if desired.

What tools do solar technicians use?

Solar technicians use various tools, including solar irradiance meters, multimeters, clamp meters, thermal cameras, and insulation testers. These tools are crucial for installing, maintaining, and troubleshooting solar power systems.

How do I know if a PV module is safe?

Evaluate the PV module insulation under wet operating conditions to verify that moisture (rain, fog, dew, snow, or any other sources of moisture) does not enter the active parts of the module, where it may cause corrosion and other safety hazards. Measure the durability and longevity of PV panels.
