Can a reinforced concrete block support a solar panel above ground?

In areas where penetration of the ground is difficult or restricted for archaeological or safety reasons, our reinforced concrete blocks are the perfect solution, providing ballast to support these solar panels above ground. Our solar panel ballast blocks are designed to provide support to multiple panels.

Can a concrete base support solar panels?

An example of free-standing concrete bases being used to support solar panelscan be seen at Wellingborough solar farm. Due to an archaeological restriction on part of the land,our bespoke division manufactured 275 reinforced concrete blocks,this allowed a group of panels to be erected without the need for excavation.

Can a block be used to support solar panels?

An environmentally friendly solution, using blocks instead of penetrating the land means a field can be quickly returned to agricultural use if required. An example of free-standing concrete bases being used to support solar panels can be seen at Wellingborough solar farm.

What are solar panel ballast blocks?

The solar panel ballast blocks provide a non-invasive, stable base to secure solar farm panels to. The flexible mould system used for casting the prestressed blocks enables for the solar panel bases to be cast in any size to suit the dimensions of the specified solar modules.

What types of solar ballast footings does Conigliaro block manufacture?

Conigliaro Block manufactures all types of precast concretesolar ballast footings used to securely mount and position solar panels. Our solar ballast blocks are poured to your specifications to prevent movement and overturning of solar panel systems. Our footings are available in a wide range of sizes, weights and mixes.

Should I use precast concrete ballast blocks for my solar panel project?

Choosing to use our precast concrete ballast blocks for your solar panel project can provide you with added flexibility. Ballast blocks can be used on flat commercial-style roofs, where it is not possible to penetrate the roof surface, and are simpler to install than penetrating systems.
