Can a photovoltaic system be connected to a building electrical installation?

Indeed, a photovoltaic system can be connected to the building electrical installation at different places: to the main low-voltage (LV) switchboard, to a secondary LV switchboard, or upstream from the main LV switchboard. These options, their advantages and drawbacks are discussed in this blog post. 1.

What is a solar photovoltaic system protection qualification?

know solar photovoltaic system protection techniques and components. This qualification is aimed at experienced and practicing electrical operatives. On application for the qualification, the Approved Centre (AO) will carry out an Initial Assessment of the learner's capability to complete the qualification.

Should a PV system be isolated before electrical work is performed?

A PV system is an additional source of supply, so both the mains supply and the PV supply must be securely isolated before electrical work is performed on the installation.
