How often should a solar PV system be inspected?

In this respect, there are some key solar PV system features that rely on adequate and appropriate electrical testing and inspection being undertaken on a regular basis. IEC 62446 recommends that periodic verification of an existing installation shall be performed.

Are regular solar panel inspections a good idea?

Regular, scheduled inspections can sometimes be more cost-effective in the long run compared to emergency inspections. Basic visual inspections are cheaper than advanced methods involving drones or thermal imaging. Regular solar panel inspection is essential for maintaining the efficiency, safety, and longevity of your solar energy system.

How many solar PV installations are there in the UK?

Over the past years, the UK has experienced exponential growth in solar photovoltaic (PV) deployment; for example, in January 2010, the UK had only 5735 PV installations, whereas according to the latest figures published by the UK government, end of August 2022, there is a total of 1,201,908 PV installations ¹.

Why is solar panel inspection important?

To ensure that your solar panels are functioning optimally, regular solar panel inspection is crucial. This guide will walk you through the importance of solar panel inspections, common defects to look out for, a detailed inspection checklist, and the different quality standards for solar panels.

Why do solar PV systems need periodic electrical testing?

The periodic testing of the electrical cabling and components associated with solar PV systems will ensure the safe operation of the system and reduce the potential fire risk associated with any electrical faults. All solar PV installations require the provision of various documentation and forms to the customer.

Do solar PV systems need electrical testing?

Periodic electrical testing of solar PV systems to identify and confirm continued safe operation and maximum energy output performance can be required as part of product warranties and PV system component guarantees. As the number of rooftop solar installation systems have grown over the years, so have the number of reported incidents of fires.
