

## Research on the development prospects of lithium battery energy storage

How to improve the production technology of lithium ion batteries?

However, there are still key obstacles that must be overcome in order to further improve the production technology of LIBs, such as reducing production energy consumption and the cost of raw materials, improving energy density, and increasing the lifespan of batteries .

Why are lithium-ion batteries important?

Lithium-ion batteries (LIBs) have become a crucial component in various applications, including portable electronics, electric vehicles, grid storage systems, and biomedical devices. As the demand for LIBs continues to grow, the development of production technology for these batteries is becoming increasingly important [1,2,3,4,5].

What factors affect the production technology of lithium ion batteries?

One of the most important considerations affecting the production technology of LIBs is the availability and cost of raw materials. Lithium, cobalt, and nickel are essential components of LIBs, but their availability and cost can significantly impact the overall cost of battery production [16,17].

Why do we need different expertise in lithium ion batteries?

Diverse expertise is required to address the battery as a whole. Controlling side reactions associated with the electrolytes used in Li-ion batteries is a major part of enabling the adoption of new battery materials.

How does lithium ion (Lib) technology affect battery performance?

These challenges can affect the performance, lifespan, and safety of battery modules in various ways, highlighting the importance of ongoing research and development in this field. Traditional LIBs utilize organic liquid electrolytes, which can undergo side reactions with high-activity lithium metal.

Are lithium ion batteries more cost competitive?

The authors propose that both batteries exhibit enhanced energy density in comparison to Li-ion batteries and may also possess a greater potential for cost competitiveness relative to Li-ion batteries.
