

What type of electricity is produced in Sweden?

Renewables and nuclear are given as the electricity produced. Energy in Sweden is characterized by relatively high per capita production and consumption, and a reliance on imports for fossil fuel supplies. With 98% of electricity generation coming from renewables and nuclear in 2023, the electric grid is nearing zero emissions.

Is solar energy a sustainable technology in Sweden?

The Swedish solar cell market is still limited, with solar energy accounting for around 1 per cent of the total energy generated. In the transition to a sustainable society, wave power may be an important technology in the future, but it is still relatively undeveloped - both in Sweden and abroad.

Where is the largest hydroelectric power station in Sweden?

The largest station, the Harsprånget hydroelectric power station, is located on the upper Lule River and has a maximum production capacity of 977 MW. The Lule River is also the most productive river, with almost 18% of the Swedish installed capacity. Almost all of the medium to large plants are located in northern Sweden.
