

SAIP Automation International is a successful, independent provider of engineering and commissioning services. We also supply overall automation solutions in the following domains: electric power, wind, solar, and hydropower plants; railway traction power supplies; airports and tunnels; oil & gas extraction, transport and storage facilities.

The welding robots are only the starting point. Romanian market for robotics solutions is in its early stages. The statistics show that Romania is far behind most EU countries in terms of using robotics in the ...

Since 1990, when the first ASTI company was established, ASTI has been a constant promoter of the most advanced automation systems in Romania. Currently, the company is acting in industrial automation field, participating in projects in sectors such as oil and gas, automotive, food industry, chemical industry, urban utilities.

We deliver the best technical solutions in the field of low and medium voltage electrical installations for industrial and civil projects: transformer stations, power and distribution systems, back-up systems (generators, UPS), lighting, electrical drives.

Smart Power -> operatorii -> din ce -> ce mai mult s? echilibreze o mare varietate de elemente folosind surse de energie diferite - de la combustibilii fosili conven?ionali la energia ...

From transformers to invertors, EV chargers to generators, power equipment is all around us and charges our daily lives. At Atlas Copco, we are dedicated to creating tools and solutions that are reliable and safe, environmentally responsible, and tailored to your specific needs.

Smart Power -> operatorii -> din ce -> ce mai mult s? echilibreze o mare varietate de elemente folosind surse de energie diferite - de la combustibilii fosili conven?ionali la energia regenerabil? - -> centralele electrice principale ?i -> substaii, sunt necesare strategii mai inteligente de gestionare a energiei.

The welding robots are only the starting point. Romanian market for robotics solutions is in its early stages. The statistics show that Romania is far behind most EU countries in terms of using robotics in the production processes, except for automotive industry.
