

# Rooftop photovoltaic bracket height regulations

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

Do rooftop solar installations need planning permission?

Rooftop solar installations always need building regulations approval, but rarely require planning permission. This is because they generally fall under permitted development rights, which allow homeowners to make reasonably sized changes without getting permission.

Do solar panels comply with building regulations?

Your solar panel system must comply with building regulations in terms of structural integrity, electrical safety and fire safety. These regulations may vary depending on the size and type of the installation. It's advisable to work with accredited installers who are familiar with these requirements.

How much weight can a solar roof hold?

Installers must only fit solar panels if they're sure your roof can hold their weight, and carry on doing so for up to 40 years. Fortunately, most roofs in the UK are built to hold much more than a solar panel system, which usually weigh around 20kg per square metre when everything's included.

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:

What should be considered when planning a roof installation?

The specifications of the roof covering and roof weatherproofing system should always be taken into account when planning an installation. In particular, it is important to ensure that the thermal insulation, weathertightness, ventilation and structural stability are not compromised by the installation.

A durable, 2mm thick stainless steel bracket enables secure and easy installation of photovoltaic panels on a Metrotile roof system. The brackets have been specially designed to be screwed into the rafter centres and sit between the ...

Most Australian homes have a roof pitch of 20 - 30°, according to the CEC's guidelines; if a roof slope is not ideal, a mounting frame can correct the orientation and elevation of panels. On flat ...
