What is Russia's 29B6 container radar?

The unique 29B6 Container radar is part of Russia's early warning system for detecting incoming threats from thousands of miles away, such as long-range ballistic missiles. It can track the launches of cruise and hypersonic missiles and the take-off of aircraft from up to around 1,860 miles away, according to Russian state news agency Tass.

What is a container radar (Konteyner RLS)?

The Container radar [Konteyner RLS] is an over-the-horizon unit built to detect all types of aerodynamic targets. The radar &quot;Container&quot; allows detecting air targets in the sector of 240 degrees and at a distance of more than 2.5 thousand km.

How angular is Russia's Konteyner radar?

Its angular coverage is close to 180 degrees, allowing Russia to make do with a mere handful of such radars. Importantly, the Konteyner features a modular set-up, making it easy to assemble and easy to service.

29B6, nicknamed "Kontejner" (Kontayner), is a Russian over the horizon radar. It is currently very active in Europe. The radar uses 150 antenna masts with data transmission systems, transmitters and receivers, a power station, and control buildings. It can detect high-altitude and low-altitude aircraft and missiles at very long ranges.

Forthcoming in India: June 2022. Forthcoming Internationally: September 2022. An intellectually stimulating yet accessible collection of short vignettes on Russia and Germany by Alexander Kluge. Not just in light of a contested pipeline during the war in Ukraine but also after centuries of both exchange and rejection, Russia and Germany were and are as far away from each other ...
