

Farming with solar power generation is an innovation that could achieve a water-energy-food nexus by encouraging agriculturists to use less electricity and sell excess electricity to supplement their income. Groundwater protection is also promoted. Al-Saidi and Lahham (2019) 2019: Fixed - Direction (south and east)

"Agrosolar Kula" is one of those agrivoltaic projects, worth EUR340M and planned to be launched in Serbia next year. The agrivoltaic project is the first of its kind in the Balkans, and it will enable simultaneous production of agricultural crops and energy from sunlight in ...

Agrisolar, an increasingly popular and effective solution for harnessing solar energy, has finally arrived in Serbia. Organic farm Organela in the village of Gornja Bukovica has become home to the country's first agrisolar power plant.

In this way, the company continues to contribute to achieving Serbia's goal to increase the share of energy from renewable sources to at least 40% by 2040, according to Giovannetti. According to Andrija Vukovi?, CFO of MK Group, the Agrosolar project brings great innovation through the synergy of green energy and sustainable agriculture.

4 ???&#0183; An 800 MW agri-solar power plant is set to be constructed in the municipality of Kula, located in Serbia's northern province of Vojvodina. The project will be developed by the local company Agrosolar, as outlined in the detailed regulation plan published for public review.. The plant will cover an area of 714 hectares in the Kula municipality, with a total capacity of ...

Elektropionir's second project is an agrovoltaic power plant - the first one in the country - located in an organic farm in Gornja Bukovica, central Serbia. This installation, comprising 48 solar panels with a total capacity of 17.5 kWp, was built last month.

The project is called Agrosolar Kula, the first agrivoltaics project in Serbia and the Balkans and also the largest project of its kind in Europe. The investment is worth 340 million euros and will be realized in the territory of Kula municipality.

Agrivoltaic farming is the practice of growing crops underneath solar panels. Scientific studies show some crops thrive when grown in this way. Doubling up on land use in this way could help feed the world's growing population while also providing sustainable energy.

Serbia faces a pivotal moment in its renewable energy sector, with a surge in planned solar and wind projects. However, concerns arise regarding the allocation of fertile agricultural land for energy infrastructure. While

Vojvodina emerges as a hotspot for solar and wind farm development due to favorable conditions, questions linger about the ...
