Smart Solar refers to solar projects that meet three main, equally important goals: (1) safeguarding land well-suited for farming and ranching, (2) strengthening farm viability, and (3) accelerating solar energy development.. Significantly more renewable energy, including solar, is needed in the U.S. to reduce greenhouse gas emissions and combat the climate crisis.

The price of solar panels is 23% cheaper over the past five years. In contrast, residential electricity prices are higher by an average of 3% every year. This is why you can save a good deal of money by going solar. Government incentives are making it easier to transition to renewable energy such as solar energy.

The market for battery energy storage is estimated to grow to \$10.84bn in 2026. The fall in battery technology prices and the increasing need for grid stability are just two reasons GlobalData have predicted for this growth, with the integration of renewable power holding significant sway over the power market.
