

Sheep under solar panels

Do solar panels make sheep grazing better?

Tom Warren lets his sheep run between the solar panels. (ABC Rural: Hannah Jose) Sheep grazing under solar panels at farms in NSW's Central West have produced better woodland more of it in the four years since the projects began, according to growers.

Are solar panels good for sheep?

Sheep living in pasture with solar panels benefit from shade in hot weather and more nutritious grass- and they stop weeds from growing on the panels. Sheep living among rows of solar panels spend more time grazing, benefit from more nutritious food, rest more and appear to experience less heat stress, compared with nearby sheep in empty fields.

Can You graze sheep on a solar farm?

You don't get any better than that," Janna Greir said. The American Solar Grazing Association was founded in 2018 to promote sheep grazing on solar installations in the United States. Sheep are used on many solar farms in Ontario, but the idea is relatively new to Alberta.

Are sheep better than goats on solar farms?

There are a few reasons sheep are the superior choice for grazing on solar farms. For one, they are shorter than cows and horses. They will also eat most kinds of forage, which helps keep plant growth at bay. Goats, on the other hand, will chew pretty much anything, which is a bit of a risk on solar farms.

Can sheep provide good vegetation management on solar farms?

The conclusion is that animals that rotate less often can spend more time browsing or selecting preferred plant species. This indicates that sheep can provide excellent vegetation management on solar farms. Depending on forage conditions, a mix of rotational and continuous grazing can be employed.

Can sheep be used in a solar park?

Although they have had to adapt their sheep system to fit into the solar park, it is an arrangement that works well, says Mrs Morgan, who explains that the sheep are used as "lawn mowers" to manage grass while producing lambs.
