

# Should the photovoltaic panels be installed as soon as possible after unpacking

How long does it take to install solar panels on a roof?

It takes one to three months or more to install solar panels on a roof. The actual installation of the panels may only account for a day or two. Most of the time required to get your solar system up and running is spent on design, permit approval, and the final inspection of your system.

Should I upgrade my solar panels before installation?

The more common upgrades include re-roofing, upgrading your electric panel, or reinforcing your roof to ensure it can withstand the additional weight of solar equipment. If upgrades are necessary prior to installation, it can mean further delaying a solar panel installation.

What happens after a solar installation is completed?

After your solar installation is completed, it must be approved by your utility company and/or a city inspector. Your installer will have an estimate for you before work begins.

Are solar panels easy to install?

Installing solar panels is usually relatively quick and straightforward, but it's still worth getting to know all the ins and outs of how it happens. After all, considering how much solar panels cost, it makes sense to understand the process.

How long does a solar panel installation take?

A study from the National Renewable Energy Laboratory (NREL) found that it typically takes one to two weeks after the installation dates to officially receive permission to operate (PTO). The best way to make sure you'll finish your solar panel installation as soon as possible is to work with a competent, reputable solar installer.

How long before a solar installation do you need a delivery?

Your solar installer will typically make the delivery a few days before the installation, so make sure you clear a space to store all the equipment you're acquiring. Point the workers delivering your gear in the right direction, and let them do the rest.
