How is solar energy made?

Solar energy is manufactured by starting with float glass coated with a transparent conductive layer, then depositing photovoltaic absorber material using a process known as close-spaced sublimation, followed by laser scribing to pattern cell strips and create an interconnect pathway between adjacent cells.

How does solar power work?

Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use - electricity and heat. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural land. Is solar power a clean energy source?

What is a solar power plant?

It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

Is a solar power plant a conventional power plant?

The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels. Or there is another way to produce electrical energy that is concentrated solar energy.

Are solar panels making or creating energy?

Solar panels aren't making or creating the energy, they are just converting it from sunlight to electricity. As a leader in the clean energy transition, Palmetto believes solar energy can and should play a big part in the movement away from fossil fuels and traditional power plants.
