

Singapore currently relies on natural gas for most of its energy needs, but in an effort to reach its net zero carbon emissions target by 2050, the energy mix will need to rely on more clean energy by 2035 and beyond.

The Energy Market Authority (EMA) is constantly encouraging innovation within the industry by test-bedding projects and programmes. For instance, it launched the inaugural Singapore Energy Grand Challenge in 2020 to develop new technologies and solutions to strengthen Singapore's energy efficiency and security.

Among various forms of alternative energy sources such as solar, wind, nuclear, etc. solar electricity generation yields the lowest energy returns on investment (EROI) [6]. However, other low-carbon alternatives to natural gas in Singapore are not as feasible compared to solar power.

Form Energy, a company that is beginning to produce a longer-lasting alternative to lithium batteries, hit a milestone Wednesday with an announcement of \$405 million in funding. The money will ...

Singapore has set a target to have an import capacity of up to 4 gigawatts (GW) of low-carbon electricity by 2035. This would be a game-changer for Singapore's energy system by making electricity imports form about 30% of Singapore's projected energy supply then. We have since made several significant strides to make this a reality.

Solar panels at Marina Barrage. (Image courtesy of PUB, Singapore's National Water Agency) Singapore's high average annual solar irradiation of about 1,580 kWh/m² makes solar photovoltaic (PV) a potential renewable energy option for Singapore. However, we face challenges to the use of solar energy in Singapore.

Boston, MA, 4 October 2022 - Form Energy, Inc., an American technology company developing and commercializing a new class of cost-effective, multi-day energy storage systems, announced today a \$450 million Series E financing round led by TPG's global impact investing platform, TPG Rise. This financing includes amounts that are subject to regulatory approval and allocations ...

Form Energy Closes Series C to Accelerate Development Coatue, NGP Energy Technology Partners III, Energy Impact Partners and Temasek join BEV, Prelude, The Engine, Eni Next, Capricorn, and Macquarie to support long-duration energy storage ... Headquartered in Singapore, we have 11 offices around the world. For more information on Temasek ...

Solar energy will be the key in unlocking Singapore's sustainable future. With impending climate action to take, the country has to weigh in on available resources and the imaginable tomorrow when making energy transitions. In October, our Minister for Trade and Industry spoke about solar as the most viable form of renewable energy locally ...

So, reducing energy consumption can inevitably help to reduce emissions. However, some energy consumption is essential to human wellbeing and rising living standards. Energy intensity can therefore be a useful metric to monitor. Energy intensity measures the amount of energy consumed per unit of gross domestic product.

First, government policy, which plays an important role in motivating those in energy-intensive businesses, with sticks - like Singapore's new carbon tax regime - or carrots in the form of incentives and grants that help cut the costs for companies to adopt green fuels and energy-optimised service delivery.

The US\$405 million Series F brings Form Energy's investment raised to date to well over a billion dollars. It follows a US\$450 million Series E closed in 2022 and comes soon after the company began constructing its first pilot project in Minnesota. Form Energy notified media, including Energy-Storage.news, of the closing on Wednesday (9 ...

The Singapore Energy Statistics (SES) is EMA's annual online publication of Singapore's energy statistics. The SES provides users with a comprehensive understanding of the Singapore energy landscape through 35 data tables ...

3 Energy Storage Systems for Singapore 3.1 ESS has unique characteristics as it can act as both a load and a generator, allowing it to time-shift energy by charging and storing energy, and discharging the energy later when required. Depending on the technology and characteristics, ESS can provide short or sustained response.
