

What are the key statistics in the UK energy system?

Summary of some of the key annual statistics in the UK energy system: how energy is produced and used and the way in which energy use influences greenhouse gas emissions; combined heat and power, renewable energy, energy efficiency, energy prices and fuel poverty. Correction to oil and gas production and reserves, and gas demand data.

How is energy used in United Kingdom?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Why is the UK reviewing its energy transition strategy?

The review came at a timely moment, as the United Kingdom is in the process of reviewing its energy transition strategy to align with industrial and energy security goals. The United Kingdom was one of the first major economies to legally establish a net zero target in 2019.

The United Kingdom relied on fossil fuels for 40% of its electricity in 2023. Its per capita emissions were below the global average, and three times lower than in 2010. The country still relies on gas for 34% of its electricity production, but its coal phase-out is almost complete with the last remaining coal plant set to close by October 2024.

Find out all about the British energy mix: consumption, power generation and the outlook for the future.
