

Echogen is a producer of scalable heat-to-power systems. Our process captures heat energy--which would normally be lost--and converts into higher value, usable power. Echogen offers a cost-effective solution to monetize our customers' otherwise wasted heat.

Dresser-Rand, a Siemens Business, partnered with Echogen to advance the design and construction of our waste heat recovery to power systems. Echogen is a key solution offering in the Dresser-Rand/Siemens renewable energy portfolio, focused primarily on the oil & gas market.

Echogen is a leader in developing thermal systems utilizing carbon dioxide (CO₂) as the working fluid, including industrial-scale high-temperature heat pumps, heat-to-power systems, and utility-scale long duration energy storage systems. Over the past 17 years, Echogen has designed and tested systems up to 7 MWe capacity, and is presently developing CO₂-based energy storage ...

Thus, the Echogen PTES system maintains a low environmental footprint through its value chain. Why CO₂? CO₂ is the best fluid for PTES, providing high-performance, low cost and low impact; Charging: CO₂ is one of the first heat pump fluids ever used (charging cycle), and condenses near 0°C; Generating: CO₂ power cycles are commercially ...

Echogen is a leader in developing thermal systems utilizing carbon dioxide (CO₂) as the working fluid, including industrial-scale high-temperature heat pumps, heat-to-power systems, and ...

Echogen Power Systems, a leader in sCO₂ energy systems, is pleased to announce the signing of an agreement with Westinghouse Electric Corporation, to pursue the deployment of Echogen's cutting-edge pumped thermal energy storage (PTES) technology for grid-scale, long-duration energy storage. 11/27/2024 // Press Releases // [read more](#)

Once commercial, applications for long duration storage on renewable-driven conventional grids include: Pairing with wind and solar - for high capacity factor power plants; Stand-alone storage - to defer investment in new transmission (larger scale) and new distribution (smaller scale) due to changes in power supply and demand locations; Islanded power grids - to lower power costs ...

Echogen has positioned itself as an industry leading developer of sCO₂ technology and has built a robust and validated model base and laboratory capabilities through years of testing and development work. ... CO₂ to air and/or water-cooling capability, an inventory control system, and an Allen Bradley control system for data acquisition ...

Echogen is developing a solution called Electrothermal Energy Storage (ETES) --where excess generation and

off-peak electricity is converted and stored as heat and is later converted back to electrical power. Echogen has combined its expertise in supercritical carbon dioxide (sCO₂)-based power cycle technology and components with safe, low-cost, highly-scalable storage ...

Today, we are a proud provider of an advanced waste heat recovery system that uses CO₂ as its working fluid, the first of its kind to provide at a commercial scale, allowing for a more compact, lighter and economical solution. We offer ...

Echogen Power Systems is founded to develop an improved waste heat recovery system ; Our first prototype (5 kW) is completed with an absorption heat pump using carbon dioxide and a preferred secondary fluid ; 2008. A second prototype (15 kW) is designed to operate with liquid CO₂ ; 2009. A nominal 200 kW demonstration unit was designed and ...

Echogen's values shape our culture and guide the way we run our business. They describe our business as we expect it to be, while guiding every decision we make. ... Echogen Power systems, LLC +1 234.542. ...

Our scalable heat engine is able to deliver a wide range of power outputs, currently from 1 to 9 MW of net power but feasible up to 500+ MW. Our flexible system allows our customers to source power back to their facility, or to sell to the local utility for alternative returns.
