Why are new solar PV plants being installed in Slovakia?

Soaring energy prices, new reserved capacities for renewables, and a few incentive schemes, among other factors, are likely to result in new large-scale solar PV plants being deployed in Slovakia, significantly increasing the installed capacity in coming years.

How can Slovakia stay on track with solar PV?

In order to stay on track, Slovakia needs to implement the total of 2,855 MW in solar PV plants by 2030. Hence, this scenario requires a clear action of the Slovak Government and a preparation of an enabling investment environment that would allow for a rise of new solar PV capacities.

Does Slovakia have a rooftop solar energy potential?

According to the report *Rooftop Photovoltaic Energy Potential in Slovakia (2023)*, drafted for SAPI by Energiewerkstatt, Slovakia has a theoretical (realisable) rooftop PV potential of around 37 GW.

Will NECP be able to harvest Slovakia's solar potential?

The current Slovakia's NECP projects a solar PV target of 1,200 MW cumulatively installed in 2030. While the NECP does not specify the character of these capacities, it is to be assumed that both ground-mounted and rooftop PV will play a role in harvesting Slovakia's solar potential.

What percentage of electricity is generated in Slovakia?

fifth (17%), and bioenergy with a small share of 6%. There are only 3 MW of installed wind capacity and no existing geothermal plants 2,574 MW generating electricity in Slovakia. See in Graph 1.

Is geothermal energy used in electricity production in Slovakia?

At the end of 2022, geothermal energy is not used in electricity production, but only to a limited degree for heat production and recreational use. This makes it the only RES-E technology in Slovakia without any installed capacity. Slovakia's overall (probable) geothermal potential is calculated at around 6,200 MWt.
