

Is France ready for a smart grid?

Today, France is one of the most advanced countries in the world when it comes to the digitalisation of its electrical grid and the industrial deployment of smart grid use cases. RTE and Enedis, respectively France's TSO and DSO, have already integrated many smart grid solutions into their day-to-day network management process.

How will think smartgrids impact France?

The dynamic that France will inspire by implementing Think Smartgrids recommendations and projects is also likely to provide significant prospects for international development among French businesses, from start-ups to major operators and equipment manufacturers, energy companies and digital service companies.

What is a smart grid reference?

This one-stop reference covers the state-of-the-art theory, key strategies, protocols, applications, deployment aspects and experimental studies of communication and networking technologies for the smart grid.

How big is the smart grids market in France?

The Smart Grids market is developing dynamically in France and abroad. In France, it represents approximately 2 billion euros and 7.5 billion euros if we include the international projects of French stakeholders<sup>1</sup>.

What is the role of data communication and networking in smart grid?

Advanced data communication and networking techniques will play a key role in the successful development of the emerging smart grid system. The communication network in the smart grid must be able to support all aspects of generation, transmission, distribution, as well as the requirements of users and utility service providers.

Are there existing networking methods in the smart grid?

Existing networking methods along with their advantages and weaknesses are highlighted for future research directions. The communication network architecture in the smart grid, with details on each networking technology, switching methods and medium for data communication, is critically reviewed to identify the existing research gaps.
