

What is a smart grid roadmap?

This roadmap provides a consensus view from more than 200 government, industry, academia and consumer representatives on the current status of smart grid technologies, and it charts a course for expanding their use from today to 2050.

What should be included in a smart grid roadmap?

This roadmap provides some insights into the benefits and possible regional pathways for smart grids deployment, but more analysis is needed, particularly of the generation side, to provide a more complete picture of system performance. Additional regional examination is also needed to consider specific system attributes.

How can smart grids achieve the goals outlined in this roadmap?

In order to reach the goals set out in this roadmap, smart grids need to be rapidly developed, demonstrated and deployed based on a range of drivers that vary across regions globally. Many countries have made significant efforts to develop smart grids, but the lessons learned are not being shared in a co-ordinated fashion.

How will smart grids support variable generation technologies?

Smart grids will support greater deployment of variable generation technologies by providing operators with real-time system information that enables them to manage generation, demand and power quality, thus increasing system flexibility and maintaining stability and balance.

Could smart grids be a way to access electricity in sparsely populated areas?

As a means to access to electricity in sparsely populated areas, smart grids could enable a transition from simple, one-off approaches to electrification (e.g. battery- or solar PV-based household electrification) to community grids that can then connect to national and regional grids (Figure 9). Figure 9.

Where can I find a website address for a smart grid?

Website addresses can be found on page 48. Smart grids can provide significant benefits for developing countries that are building up electricity system infrastructure. In some cases, the solutions applied in developed countries will be appropriate; in others, targeted approaches will be required.

In short By the end of 2023, 1.06 billion smart meters (electricity, water and gas) have been installed worldwide, according to IoT Analytics" Global Smart Meter Market Tracker 2020-2030. Smart meters enable utility service providers across the world to digitalize their distribution infrastructure and services efficiently with near real-time data. North America has ...

The EU introduced a strategic energy technology plan in 2006 for the development of a smart electricity system over the following 30 years. If the EU is to meet its 2020 targets of increasing energy efficiency by 20%, increasing its share of renewable energy by 20% and reducing its greenhouse gas (GHG) emissions by 20%, it must modernise and liberalise ...

Smart grids co-ordinate the needs and capabilities of all generators, grid operators, end users, and electricity market stakeholders. This allows the grid system to operate as efficiently as possible, minimising costs and environmental impacts while maximising system reliability, resilience and stability.

Map of the exclusive economic zone of Saint Pierre and Miquelon. France claimed a 200-nautical-mile (370 km; 230 mi) exclusive economic zone for Saint-Pierre and Miquelon, and in August 1983 the naval ship Lieutenant de vaisseau Le Hénaff and the seismic ship Lucien Beaufort were sent to explore for oil in the disputed zone.
