Is solar power a part of a smart home?

Solar power is a critical component of the modern Smart Home, and it offers more value and clean energy impact than any other element of your smart network. To learn more about making solar power a part of your Smart Home project, contact one of our experts today.

Does a solar system make a smart home work?

A solar system provides clean, renewable, accessible energy to a modern Smart Home. As we mentioned earlier, a Smart Home requires power and connectivity, and even if every one of your new devices is conservation minded and consumption reduced, you still need power to make it all work.

What is a smart solar panel & how does it work?

It's the same strategy that installers have used with backup generators for decades. A smart panel offers extra flexibility. It works like an air traffic controller between your solar battery and your home's energy needs, monitoring your power usage and adjusting the power flow based on rules that you (or your installer) set in an app.

Can solar power make a smart home sustainable?

Taken as a whole, an IoT (Internet of Things) capable Smart Home requires a lot of power to operate, and where that energy comes from should be part of the conversation. If we want to achieve a sustainable model for the Smart Home, it's time to bring solar power to the table.
