What is a solar generator?

Solar generators are portable battery storage systems powered by solar panels. Unlike solar-plus-storage systems, solar generators are not designed to back up major appliances in the event of an outage. You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries.

What can a solar powered generator charge?

These generators can charge power tools in the shop, laptops for remote work, and personal devices like bluetooth headphones and speakers. A solar-powered generator with a higher power capacity can even power household appliances in the event of a power outage.

What is a portable solar generator?

You can generate power even when the sun isn't out. So, portable solar generators are excellent for activities like camps, where you may not access fuel. Portable solar generators are also handy during power outages and backyard DIY projects. You can choose a generator with several outlets to power different power-dependent devices.

Are solar generators eco-friendly?

Harnessing the sun to create backup power is an eco-friendly alternative to fuel-guzzling gasoline or dual-fuel generators. Also called solar "power stations," solar generators feature high-capacity batteries that store energy that can be used to power appliances and digital devices.

Which solar powered generator is right for You?

If you need something portable for a camping trip, then the Jackery 500W might be your best new travel buddy. When deciding what solar powered generator is right for you, consider which types of appliances, tools, and devices you need to charge and how often you'll be without a traditional power source.

Are solar panels a generator?

Solar panels can't act as generators on their own - the electricity they generate needs to be stored somewhere. So, solar generators typically consist of two main products: solar panels and a battery storage system. When you place your solar panels out in the sun, they generate direct current (DC) electricity.

A solar generator transforms solar into electrical energy via a chain of processes. First, when the sun hits your panel, the photons knock the electrons loose from the atoms. Next, the photovoltaic cells convert electrons ...
