Which connection kits are available for solar expansion vessels?

BES stocks a wide range of connection kits for solar expansion vessels. Our most popular connection kit can be used with 12, 18 and 24 litre vessels. Essential in storing expelled solar glycol fluid, the most popular recovery container we have here at BES is the Safe Valve Solar Fluid Recovery Container, which comes with a drain valve.

Which solar expansion vessels are available?

Solar expansion vessels from top manufacturers such as Solar-Plus and Eresare are available in this range. With all available solar expansion vessels designed for solar heating systems, they come in a variety of sizes to suit different system requirements and have a maximum working temperature of 130°C.

What sizes are available for solar thermal expansion vessels?

Available in 12, 18, 24, 35 and 50 litre sizes, we offer a wide range of expansion vessels made from durable materials and specifically designed for solar thermal heating systems. Our range of solar thermal expansion vessels includes the following:

Why do solar thermal heating systems need expansion vessels?

This compression of air allows the expansion vessel to absorb the pressure caused by the expansion of water, thus protecting the system from damage. Available in 12, 18, 24, 35 and 50 litre sizes, we offer a wide range of expansion vessels made from durable materials and specifically designed for solar thermal heating systems.

How does an expansion vessel work?

With great prices, fast shipping and free returns, shop for expansion vessels confidently with BES. An expansion vessel works by providing a cushion of air that absorbs the excess pressure caused by the expansion of water in the system. When the water expands, it enters the expansion vessel, compressing the air inside it.
