What is Hungary's Energy Strategy?

The strategy aims to contribute not only to the fulfilment of Hungary's EU commitments and the societal needs towards more sustainable energy production, but also to trigger the development of a stable and healthy credit portfolio for the financiers of the power sector.

How will Hungary transform its power system?

However, the transformation of the power system is still at an early stage. Hungary's national energy strategy earmarks at least a six-fold increase in domestic renewable installed capacities over the next 10 to 20 years, which would in principle lead to a similar increase in the related bank loan portfolio that finances the capacity expansion.

Which country has the greatest solar energy potential?

It is noteworthy that due to their geographical features, the areas of Hungary with the greatest solar energy potential are Csongr&#225;d, Baranya, Tolna and B&#225;cs-Kiskun counties.<sup>9</sup> With the exception of the latter, currently there are relatively few solar power plants under construction in these counties when compared to their good solar resource.

Is there a wind property law in Hungary?

There is no corresponding area in Hungary. In several European countries, this clearance is less than 1,200 m. Act LXXXVI of 2007 on Electricity Article 7/B\*(1-3): the establishment of wind property law treatment of power plants is not uniform across the country, which has negative consequences on the valuation and enforcement of collateral.
