

Is Croatia ready for solar energy storage?

"There is immense scope for energy storage in Croatia, predominantly for battery storage." GlobalData says that Croatia is now on target to meet its 36.4% renewable energy target by 2030. However, its recent investment in energy storage has not been accompanied by rapid solar PV development.

How can Croatia benefit from solar energy?

However, to harness this potential effectively, Croatia will need to adopt more ambitious solar energy targets, ensure clear renewable energy investment direction in the power sector, and develop its modern electricity grid. The clean energy transition and development of the solar power sector can contribute to GDP growth and new jobs creation.

Is solar irradiation a viable energy source in Croatia?

The abundance of solar irradiation in Croatia shall enable photovoltaic energy to become an increasingly cost-competitive power generation source and attract new investments. Croatian solar resource potential Energy Institute Hrvoje Požar initiated several solar radiation measurements projects in Croatia.

Is Croatia a solar energy producer?

According to the guidelines, Croatia has all the natural prerequisites to be one of the most significant producers of solar energy in the EU, however, this chance has been missed because of an uninspiring legislative framework.

How much solar capacity does Croatia have?

Historical solar photovoltaic market development of Croatia Croatia had a cumulative installed solar capacity of eligible producers of 53.4 MW at the end of 2020. The first photovoltaic installations under the feed-in tariff (FIT) scheme started operation in 2012 and 2013. By the end of 2014, the country had approximately 33 MW solar capacity.

How much electricity is produced by solar power plants in Croatia?

Electricity from solar power plants in the EU accounts on average for 5% of the total electricity produced, while in Croatia this share is only 0.4%. In order to reach the EU average, it is necessary to install at least 800 MW of solar power plants, which is significantly more than the current 100 MW.
