

How old is solar power?

Though solar power as we know it is no more than 60 years old, the discoveries that led to the solar cell began nearly 200 years ago. These discoveries about the properties of light and conductivity have made solar power what it is today.

How did solar energy grow in the late 2000s?

The late 2000s was a crucial time for the growth of solar energy. Global investment in clean energy exceeds \$100 billion, with solar energy as the leading clean energy technology for venture capital and private equity investment. The solar tax credit helped to create unprecedented growth in the U.S. solar industry from 2006 to 2007.

When did solar cells start converting sunlight into energy?

In 1994, the National Renewable Energy Laboratory developed a new solar cell from gallium indium phosphide and gallium arsenide that exceeded 30% conversion efficiency. By the end of the century, the laboratory created thin-film solar cells that converted 32% of the sunlight it collected into usable energy.

When was solar energy first installed in Germany?

1990 - The Magdeburg Cathedral installs solar cells on the roof, marking the first installation on a church in East Germany. 1991 - President George H. W. Bush directs the U.S. Department of Energy to establish the National Renewable Energy Laboratory (transferring the existing Solar Energy Research Institute).

How did solar power become a success?

Take a look at the brief history of the key events that led to solar power becoming the success that it is today. While experimenting with metal electrodes and an acidic solution, nineteen-year-old French physicist Alexandre Edmond Becquerel creates the first solar cell.

When did NASA start using solar power?

In 1958, the Vanguard I satellite used a tiny one-watt panel to power its radios. Later that year, the Vanguard II, Explorer III, and Sputnik-3 were all launched with PV technology on board. In 1964, NASA was responsible for launching the first Nimbus spacecraft, a satellite able to run entirely on a 470-watt solar array.
