What is the future of solar energy?

The Future of Solar Energy considers only the two widely recognized classes of technologies for converting solar energy into electricity -- photovoltaics (PV) and concentrated solar power (CSP), sometimes called solar thermal) -- in their current and plausible future forms.

Are solar photovoltaics ready to power a sustainable future?

Nat. Energy 3,515-527 (2018). Victoria,M. et al. Solar photovoltaics is ready to power a sustainable future. Joule vol. 5 1041-1056 (Cell Press,2021). Nemet,G. How solar energy became cheap: a model for low-carbon innovation. (Taylor & Francis,2019). Rogers,E. Diffusion of Innovations. (Free Press,2003). Farmer,J. D. & Lafond,F.

Is solar PV the fastest growing energy technology in 2021?

With a 37% compound annual growth rate (CAGR), solar PV emerged as the fastest growing energy technology and the one with the brightest prospects. The market size in 2021 represents a 18% increase from 2020 and a 445% growth compared to 10 years earlier.

Could a new solar technology make solar panels more efficient?

Solar cells that combine traditional silicon with cutting-edge perovskites could push the efficiency of solar panels to new heights. Beyond Silicon, Caelux, First Solar, Hanwha Q Cells, Oxford PV, Swift Solar, Tandem PV 3 to 5 years In November 2023, a buzzy solar technology broke yet another world record for efficiency.

What was the growth rate of solar energy in 2021?

During the period 2019-2021, solar energy expansion outpaced any other technology, with a compound annual growth rate of 21%. 2021 was also the first year when solar and wind together met more than 10% of the world's global power demand. Solar represents 3.7% of all generated electricity in 2021 and wind represents 6.6% .

Can solar power drive the energy transition?

The reports show that solar is increasingly emerging as the technology of choice to drive the energy transition, thanks to its technical and financial maturity, modularity, flexibility, and potential for sector coupling. As a result, solar installations reached 920 GW in 2021, and are now venturing into the terawatt scale for the first time.
