

The proposed configuration boosts the low voltage of photovoltaic (PV) array using a dc-dc boost converter to charge the battery at 96V and to convert this battery voltage ...

Abstract: The matching to solar-cell generators of both separately excited and series DC motors driving pumping loads is addressed. It is shown that the maximum gross mechanical power ...

Using a large array of PV systems for solar power generation has its own limitations when connected to the stand-alone load or to the power grids such as voltage fluctuations and a high-frequency ...

Powering electric motors with solar energy provides a sustainable and 24-hour solution harnessing the power of the sun, solar-powered electric motors can operate continuously, reducing reliance on ...

Therefore, intermittent solar PV power generation and uncertainties associated with load demand are required to be accounted to gain a holistic understanding on power grid ...

described as max power (P_{max}). The rated operating voltage is 17.2V under full power, and the rated operating current (I_{mp}) is 1.16A. Multiplying the volts by amps equals watts (17.2×1.16 ...

This article presents a brushless DC motor drive using a solar photovoltaic (PV) array and grid. Solar PV array-fed drive systems typically need a DC-DC converter stage in order to optimize the solar PV array-generated ...
