

How does a space solar power demonstration work?

The Space Solar Power Demonstrator's MAPLE experiment was able to wirelessly transfer collected solar power to receivers in space and direct energy to Earth. When you purchase through links on our site, we may earn an affiliate commission. Here's how it works.

How does space solar power work?

Here's how it works. A space solar power prototype has demonstrated its ability to wirelessly beam power through space and direct a detectable amount of energy toward Earth for the first time. The experiment proves the viability of tapping into a near-limitless supply of power in the form of energy from the sun from space.

Can space solar power beam power to Earth?

A space solar power prototype that was launched into orbit in January is operational and has demonstrated its ability to wirelessly transmit power in space and to beam detectable power to Earth for the first time.

How has SSPP changed space solar technology?

“SSPP gave us a unique opportunity to take solar cells directly from the lab at Caltech into orbit, accelerating the in-space testing that would normally have taken years to be done. This kind of approach has dramatically shortened the innovation-cycle time for space solar technology,” says Atwater. MAPLE: Wireless Power Transfer in Space

Are solar-powered robots a 'green' energy source?

You have probably heard about using renewable energy sources like wind and solar power to provide electricity to homes and buildings, as well as hybrid or fully electric cars that use less (or zero) gasoline. But what about solar-powered robots? As robots become more common, it is increasingly important to use “green” energy sources to power them.

Will SSPD-1 help chart the future of space solar power?

Now, with SSPD-1's mission in space concluded, engineers on Earth are celebrating the testbed's successes and learning important lessons that will help chart the future of space solar power. “Solar power beamed from space at commercial rates, lighting the globe, is still a future prospect.
