

Solar power mobile toilet manufacturer

Where are portable toilets made?

To turn every visit into a great one, we passionately produce portable toilets at our headquarter in Coswig(Anhalt). All made of UV resistant polyethylene or premium sandwich panels according to DIN EN 16194. And finally, if you'd like to know how we turn simple PE powder into your lovely GLOBAL toilet, then just visit our production.

Can solar panels power a toilet?

Solar panels collect sunlight and convert it into electricity which is used to power the toilet. This way there are no chemicals and it won't consume lots of water.

How do solar composting toilets work?

Solar composting toilets work by incorporating a solar panel which then operates an electrochemical reactor, converting human waste into solids that can then be used as fertilizer and hydrogen that can be saved and stored in fuel cells and used to power the reactor during periods of low, or no sunshine.

Are solar toilets eco-friendly?

Plus, composting your waste in a self-contained composting toilet instead of sending it down the flush toilet to a septic tank is pretty much the most environmentally friendly option! A solar toilet can also be a waterless toilet- this means you can save on the water bills and help the environment that little bit more.

Why should you choose Sunnyda VIP mobile toilets?

Sunnyda VIP Mobile Toilets are the perfect solution for maintaining facilities in various sectors, including staging, camping sites, weddings, construction areas, and factories. They offer additional facilities such as a sink and non-splash urinal.

Can solar energy be used to make a composting toilet?

Various manufacturers have tried many different methods and techniques to attain these aims, but none have been as effective as the Bio-drum, invented by Sun-Mar, who are the pioneers of the composting toilet business since the 1960s. Now let's take a look at how the solar energy comes into play with a composting toilet.
