How do I determine my home's solar rooftop potential?

Determine your home's solar potential. Aside from your roof's condition, your home's solar rooftop potential depends on your geographic location, the position of your home in relation to the sun, how much shade you have, and the PV system you and your installer choose.

How much solar power does a roof generate?

In a perfect world, the average roof in the U.S. can generate around 35,000 kilowatt-hours (kWh) of solar electricity annually--far more than the average home's annual electricity usage of 10,600 kWh. Realistically, your roof's solar generation potential will be less than that.
